Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                length

Novel polypeptides and nucleic acids homologous to transmembrane receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune disorders.

Claim 9a; Page 142; 323pp; English

The invention relates to 24 novel human proteins designated NOV1-NOV14

(ABB09501-ABB09524), collectively referred to as NOVX proteins, and
mucleic acids encoding them (ABQ03879-ABQ03902). NOVX proteins and
mucleic acids encoding them (ABQ03879-ABQ03902). NOVX proteins and
conditions are useful in the treatment, diagnosis or prevention of NOVXassociated disorders or in the manufacture of a medicament for treating
cuch disorders, based on their homology to known proteins. Various
disorders are associated with NOVX proteins including neurological
disorders are associated with NOVX proteins including neurological
disorders are additional disorders, addition, tuberous sclerosis, cancers
cc disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases),
cc disorders and autoimmune disorders encorations and parkinson's abune.
cc de-g., Appertension), reproductive disorders, endometriosis,

CC disorders are associated with NoVX proteins including neurological disorders are associated with NoVX proteins including neurological cdisorders (e.g., Alzheimer's, Huntington's and Parkhison's diseases), pain, behavioural disorders, addiction, tuberous sclerosis, cancers (e.g., allergies and autoimmune diseases), wastchenia gravis, asthma, various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, asthma, continence, psoriasis, scleroderma, alopecia, ulcers, pancreatis, circontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatis, circontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatis, circontinence, psoriasis, scleroderma, alopecia, ulcers, pancreatis, cell signal processing-related disorders endocrine disorders, obesity, bacterial infections and particularly cardiomyopathy, atherosclerosis, cell signal processing-related disorders and disorders of metabolic pathway regulation. NoVX mucleic acids and polypeptides may be used to identify cellular receptors or downstream effectors which binds to a NoVX protein, and are also useful as targets for the identification of small molecules that modulate or inhibit processes such is not ifferation, haematopoiesis, wound healing and angiogenesis. NoVX cucleic acids sequences can be used to identify a cell or tissue type and are useful as a source of primers or probes for forensic biology and for identifying and cloning NoVX homologues in other cell types. Cells comprising NOVX mucleic acids are useful for studying the function and current sequence represents DNA encoding the present sequence represents DNA encoding the present sequence represents DNA encoding the prostatin precursor-like protein NOV14b 888888888888888888888888888888888

Nucleic acids encoding novel human proteases, useful for useful

-

```
The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. restenosis and disorders (e.g. inflammatory thrombosis), brain or neuronal-associated diseases, metabolic coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, pain, sexual dysfunction, mood disorders (e.g. rennion disorders, pain, sexual dysfunction, mood disorders, attention disorders, hypotension, hypertension, psychotic disorders, neurological disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias. The nucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency virus (HIV), and non-viral infections such as ocular disease (e.g. virus (HIV), and mon-viral infections such as ocular disease (b.g. virus (HIV), and mon-viral infections caused by human immunodeficiency colors and and mon-viral infections such as ocular disease (e.g. virus (HIV) and mon-viral infections can be accounted to the color of the colors of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           349

New isolated Protein Modification and Maintenance polypeptides, useful for diagnosis, and treatment of e.g. gastrointestinal disorders.

WPI; 2002-519664/55. P-PSDB; ABB98135.

```
The invention relates to an isolated Protein Modification and Maintenance (PMM) polypeptide. Polypeptides of the invention may be used in the diagnosis, treatment and prevention of disorders associated with decreased expression or activity of PMMM. These include gastrointestinal disorders (e.g. Crohn's disease), cardiovascular disorders (e.g. en) typertension), autoimmune/inflammatory disorders (e.g. anaemia), cell hypertension), neurological disorders (e.g. Alzheimer's disease) creproductive disorders (e.g. ectopic pregnancy), and in gene therapy or a vaccine for such diseases. They may also be used in the assessment of the creffects of exagenous compound on the expression of nucleic acid and amino acid sequence represents a human PMMMM encoding sequence of the invention, encoding a polypeptide which has been found to have homology
                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           589
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             667
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               649
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         829
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    409

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the prince of the production, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TGGCCACATCTGCGGGGGTCCCTCATCGCCCCTTCTGGGTCCTCTCCGCTGCTCACTG 281

Novel human prostasin-like serine protease polypeptide and polynucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and infections.

Claim 1; Fig 1; 111pp; English.

This invention comprises the cDNA and protein sequences of an isolated prostasin-like serine protease and reagents and methods for regulating the human prostasin-like enzyme activity. Prostasin is a trypahn-like serine protease is useful fluid. An antibody specific for prostasin-like serine protease; autoimmune lesions and renal failure in biopsy specimens, plasma samples and body fluids. The antibody may be used to modulate enzyme activity in a disease, such as metastasis of used to modulate enzyme activity in a disease, such as metastasis of used to modulate enzyme activity in a disease, such as metastasis of cust to protein amyloid plaques of Genstmann-Straussler Syndrome, creutzfeldt-Jakob disease, Scrapie) or infection, particularly viral creating protein amyloid plaques of Genstmann-Straussler Syndrome, creutzfeldt-Jakob disease, Scrapie) or infection, particularly viral creapeutic target of decreasing human prostasin-like serine protease activity, in particular for treating or preventing metastatic cancer. The activity, in particular for treating or preventing metastatic cancer. The augment and inhibit the enzyme activity which may be useful to treat osteoporosis, Paget's disease and degradation of bone implants cortivity dental implants. Altered levels of human prostasin-like serine protease activity inhibits both smooth muscle cell proliferation and lipid accumulation and inhibit the progression of restenosis and atherosclerosis. The nucleic acid sequence is also useful in diagnases for detecting diseases and abnormalities or susceptibility to assays for detecting diseases and abnormalities or susceptibility to assays for detecting diseases and abnormalities or susceptibility to prostasin-like serine protease #1 nucleotide sequence of the invention

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers. Oilgomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding pattners are useful in medical imaging of sites expressing (II). (I) are useful for treating disorders involving aberrant protein expression or biological activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1.09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                460
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         520
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           580
polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     341 ACTCCCAGGACGGGCCCCTGGACGGCGCGCACACCCGCGCAGGGCCGCCATCGTGGTGC

This invention comprises the cDMA and protein sequences of an isolated prostasin-like serine procease and reagents and methods for regulating the human prostasin-like enzyme activity. Prostasin is a trypshin-like serine protease is useful fluid. An antibody specific for prostasin-like serine protease; autoimmune lesions and renal failure in diagnosis of micro-metastases, autoimmune lesions and renal failure in biopsy speciments, plasma samples and body fluids. The antibody may be used to modulate enzyme activity in a disease, such as metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive pulmonary disease (CODB), atherosclerosis, neurodegenerative disease (CoPB), atherosclerosis, neurodegenerative disease activity, in particular for treating or infection, particularly viral infection. The human prostasin-like serine protease activity, in particular for treating or preventing metastatic cancer. The augment and inhibit the henzyme activity which may be useful to treat corteoporosis, Paget's disease and degradation of bone implants of particularly dental implants. Altered levels of human prostasin-like serine protease activity inhibit the progression of restenosis and and lipid accumulation and inhibit the progression of restenosis and atherosclerosis. The nucleic acid sequence is also useful in diagnostic diseases related to the presence of mutations in mucleic acid sequences which encode the enzyme. The present sequence represents the human control protease #2 nucleotide sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CAGATAITGCCAGGGATGCTGTGTTGCTACCCAGAGGGCCGCAGGACACCTGCCAG 738
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     438

The invention relates to primers for synthesising full length CDNA clones. 830 CDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the CDNA. The full length clones were obtained by construction of full length enriched CDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA assily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a CDNA construction. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO TITCATCACCAATCCCACCTIGGAGCCCGGGGCCGAGTGGTCGGTTGCTGGGGGGGTGCA 341 CICCORGGACGGGCCCTGGACGGCGCGCACACCCGCGCAGTGGCCGCCATCGTGGTGCC 401 830 Primers useful for synthesizing full length cDNA clones and their use TGGCCACATCTGCGGGGGGCTCCTCATCGCCCCCTCGGGTCCTCTCGCTCACTG TGGCCACATCTGCGGGGGCTCCCTCATCGCCCCCTCTGGGGTCCTCTCCGCTGCTCACTG 162 gggggggttgaaacgcgggagcggggaccrggccrrrggcaagrgaggcaccarggagg Ota I, Nishikawa T, Isogai T, Hayashi K, Ishii S, Kawai Y; Wakamatsu A, Sugiyama T, Nagai K, Kojima S, Otsuki T, Koga Claim 2; SEQ ID NO 650; 1380pp + Sequence Listing; English. The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence from a human clone which was used in homology searches to identify the clone. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in CD-ROM format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  830 Primers useful for synthesizing full length cDNA clones and their use in genetic manipulation.

The present sequence encodes a human secreted polypeptide. The secreted polypeptides and polynucleotides are useful for treating nervous and consultations and metastasis, for muscular diseases, for inhibiting tumour formation and metastasis, for treating gastrointestinal ulceration, for preventing and treating classases in spinal cord, thyroid gland, ovary, prostate, renal gland, candle intestine, heart, trachea, thyrwus, lymph node, muscular system and colon, for treating lipase deficiency in cystic fibrosis and colon, for treating lipase deficiency in cystic fibrosis and constitution for treating undesirable clot formation such as myocardial confarction, during angioplasty and all surgical procedures that require confarcased blood clot formation, for treating limmume disorders, for treating inflammation and transplant rejection, for enhancing bone thickness and increasing bone density, for reducing the loss of essential ferroxidases, for suppressing apoptosis, and for regulating vascular smooth cell proliferation. They may also be used as vaccines

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed control of (II) or to treat disease states involving expressed control of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal control for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food polypeptide in tissue, as molecular weight markers and as a food (II) and (II) are useful for treating disorders of involving aberrant protein expression or biological activity. The colypeptide and polynucleotide sequences have applications in caping identification of mutations of against types of data and products dependent on DNA and amino acid sequences. Aa&&4197-AA&$94$64 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this coding sequences of the invention. The method involves the use of specific DNA markers. The method of the invention is useful in the detection and treatment of ovarian and breast cancer. DNA sequences ABT31894 - ABT31949 encode human breast/ovarian cancer-related proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for assessing whether a patient is afflicted with ovarian cancer by comparing: (1) the expression of a marker (I) (see AAF98594 to AAF98730), in a patient sample; and (2) the normal level of expression of (I) in a control non-ovarian cancer sample,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  81 desciciniencinesectanescicada desertanes desciese de describio de describio de describio de desercinista de describio de desercinista de decentral de desercinista de deser

The present invention describes a method for assessing whether a patient is afflicted with ovarian cancer by comparing: (1) the expression of a marker (1) (see AAF98594 to AAF98730), in a patient sample, and (2) the mornal level of expression of (1) in a control non-ovarian cancer sample, where a significant difference between the level of expression in (a) and (b) is an indication that the patient is afflicted with ovarian cancer. (I) have cytostatic activities and can be used in antisense gene therapy. The method, compositions and kits from the present invention can be used for: (1) assessing and treating ovarian cancer; (2) making isolated hybridoma, which produces an antibody useful for ovarian cancer
where a significant difference between the level of expression in (a) and (b) is an indication that the patient is afflicted with ovarian cancer. (I) have cytostatic activities and can be used in antisense gene therapy. The method, compositions and kits from the present invention can be used for: (I) assessing and treating ovarian cancer; (2) making isolated hybridoma, which produces an antibody useful for ovarian cancer assessment; and (3) inhibiting ovarian cancer in a patient. AAF988573 to AAF98593 represent human kinase marker primers and probes which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                            134 descectristecrissecearsseceassassassassassecrissecassecrisses

/ lote 2: Xho!; The poly (A)+ RNA was dephosphorylated with Site 2: Xho!; The poly (A)+ RNA was dephosphorylated with tabacco acid pyrophosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including Sfil site by treatment of T4 RNA ligase and the first strand cDNA was synthesized with Superscript II using Sfil oligo-dT primer. After first strand synthesis, RNA was degraded by NaOH treatment and cDNA was amplified by PCR reaction. The PCR products were digested with Sfil and cloned into DraIII- digested pMEISS-FIJ vector. The obtained cDNA vectors were used for transformation of competent cells E. coli Toplof' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

// clote="Organ: Liver; Vector: pcNS-D2; Site 1: EcoRI;
// site 2: NotI; The poly (A)+ RNA was dephosphorylated with
bacterial alkaline phosphatase (RAP) and then decapped
with tabacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including
ECORI site by treatment of T4 RNA ligase and the first
ECORI site by treatment of T4 RNA ligase and the first
strand cDNA was sputhesized from oligo dr-selected mENA by
priming with dT-tailed vector. The dT-tailed vector was
adjusted to have about 60nt. The cDNA vector was
circularized with E. coli DNA ligase after digestion of
ECORI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
competent cells E. coli Toplüf' by electroporation of
the cDNA libraries constructed by this method are
full-length enriched cDNA library."

plasmid nonA from the normalized library NoI CGAP Co10 was prepared, and as circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 10F7416-1061255, and 1144584-1145351).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

/clone libe NCI CGAP CO16"
/note=Torgan: Colon; Vector: pT7T3D-pac (Pharmacia) with a modified polylinker; Site 1: Not I; Site 2: Bco RI; plasmid DNA from the normalized library NCI CGAP CO10 was prepared, and se circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1057416-1061255, and 1144584-1143551).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0;
